Why do we need bleeds?

Bleed refers to printing that goes beyond the edge of the sheet after trimming. The bleed is the part on the side of a document that gives the printer a small amount of space to account for movement of the paper, and design inconsistencies. Bleed ensures that no unprinted edges occur in the final trimmed document.

 Bleed Area

Printing
specification:

- ▶ CMYK colour mode
- ▶ Vector files preferably
- ▶ 300dpi for rasters
